Piyush Upadhyay

Principal Software Engineer | Building Scalable Systems with Java, GCP & Kubernetes | Innovating One Microservice at a Time | Crafting Cloud-Native Solutions (Spring Boot, Docker, MongoDB, Python)

Noida, Uttar Pradesh, India

Summary

With 13+ years of experience, I specialize in building scalable, cloud-native architectures and driving high-performance engineering solutions. My expertise spans Java, Spring Boot, Kubernetes, and GCP, with a deep focus on distributed systems, microservices, and AI-driven automation.

Key Achievements & Expertise:

40% Performance Boost – Optimized microservices using Spring Boot & Kafka, reducing response times significantly.

50% Ops Overhead Reduction – Migrated legacy services to Kubernetes & GCP, improving scalability & automation.

30% Cost Savings – Designed cost-efficient cloud architectures, optimizing compute & storage resources.

AI-Powered Chatbot Framework – Developed an NLP-based chatbot using Rasa NLU, enhancing automation and customer interactions.

25% Faster Issue Resolution – Enhanced monitoring & logging with Dynatrace & Splunk, improving system reliability.

40% Reduction in Manual Efforts – Automated infrastructure provisioning using Terraform, Helm & GitHub Actions.

Technical Focus Areas:

Cloud & DevOps – GCP (GKE, Cloud Run, Cloud Functions), Kubernetes, Docker, Terraform, CI/CD Pipelines

Backend & APIs – Java, Spring Boot, REST APIs, Microservices, Python (Pandas, NumPy)

AI & NLP – Rasa NLU, Generative AI, Speech Recognition, Prompt Engineering

Security & Compliance – OAuth2.0, IAM, Authentication & Cloud Security Best Practices

Leadership & Mentorship – Driving engineering excellence, architecture reviews & team development

Certifications:

Oracle Certified Java Professional (1Z0-851)

Oracle Web Component Developer (1Z0-858)

Machine Learning by Andrew Ng (Coursera)

Introduction to Prompt Engineering for Generative AI (LinkedIn Learning)

Apache Kafka Essential Training (LinkedIn Learning)

Always eager to solve complex challenges, innovate with AI & cloud technologies, and drive business impact through scalable solutions.

Let's connect and talk Cloud, AI, and Scalable Engineering!

Experience

UKG

7 years 6 months

Senior Staff Software Engineer

January 2026 - Present (8 months)

Principal Software Engineer

January 2023 - December 2025 (3 years)

Noida, Uttar Pradesh, India

As a Principal Software Engineer, I don't just write code—I design, optimize, and scale cloud-native solutions that drive business success. With deep expertise in Java, Kubernetes, and distributed architectures, I specialize in building high-performance, secure, and cost-efficient systems that can handle scale with ease.

Key Contributions:

- ✓ Engineered and deployed microservices using Spring Boot, Kafka, and GCP services, improving system response time by 40%.
- ✓ Integrated OAuth2.0 for API authentication, enhancing security and streamlining user access control.
- ✓ Leveraged GCP for Kubernetes-based deployments, using Splunk Cloud for logging and Grafana for real-time monitoring, ensuring system reliability and performance.

Passionate about driving innovation, optimizing cloud architectures, and engineering solutions that scale effortlessly. Let's build the future of cloud computing—one microservice at a time.

Lead Software Engineer

March 2019 - December 2022 (3 years 10 months)

Noida Area, India

Passionate about architecting robust, scalable, and secure cloud solutions, I specialize in containerized deployments, cloud migration, and performance optimization while driving Java-based enhancements to elevate system efficiency.

Key Contributions:

- Engineered and optimized RESTful APIs, leveraging PostgreSQL, Java 8, JPA, and Spring 3.x, with multithreading to enhance performance.
- Integrated Dell Boomi as a third-party workflow automation platform, streamlining system orchestration.
- Spearheaded the migration of monolithic applications to Kubernetes, boosting deployment speed and optimizing resource utilization.

Tech Stack & Tools:

- ✓ Java 8 / J2EE | Spring Boot | PostgreSQL
- ✓ Google Cloud Functions | GKE & GCP
- ✓ Dell Boomi Platform
- ✓ Python | Linux & Shell Scripting

I thrive on solving complex engineering challenges, optimizing cloud architectures, and driving innovation to build next-gen scalable systems.

CenturyLink (Formerly Qwest)

Senior Software Engineer

July 2016 - February 2019 (2 years 8 months)

Noida Area, India

At CenturyLink (now Lumen), I played a pivotal role in designing, developing, and deploying scalable microservices for AI-powered chatbots, optimizing system performance, and enhancing automation capabilities.

Key Contributions:

- ✓ Designed and developed JSON-based Spring Boot microservices for various chatbot solutions.

- ✓ Customized the Hubot-Natural project to enable chatbot training via YAML files, integrating seamlessly with Rocket.Chat as the backend.
- ✓ Implemented a NoSQL-driven architecture, storing chat conversations, intents, and attributes using MongoDB (NoSQLBooster as client).
- ✓ Built containerized deployments, creating Docker images and deploying services on Kubernetes to ensure scalability and fault tolerance.
- ✓ Developed and tested microservices using Postman and optimized APIs for performance and reliability.
- ✓ Worked with enterprise technologies, including CXF-based SOAP web services, Apache Camel Routing, ActiveMQ, and JBoss Fuse 6.1, while leveraging Spring 4 as the core framework.
- ✓ Followed Agile development methodologies, ensuring rapid iterations, high-quality releases, and continuous improvements.

Genpact Headstrong Capital Markets

Consultant

July 2015 - June 2016 (1 year)

Noida Area, India

At Genpact, I worked as a Full Stack Developer on the Caremark project, particularly on the Registration module. Despite tight deadlines and complex requirements, I successfully delivered high-quality solutions while ensuring seamless collaboration with stakeholders.

Key Contributions:

- ✓ Developed and enhanced the Registration module, leveraging Java 7, Struts-based framework, and REST APIs to improve functionality and performance.
- ✓ Designed and built multiple APIs, ensuring efficient data exchange and integration within the system.
- ✓ Implemented front-end enhancements, working with HTML, CSS, JavaScript, and AngularJS to improve the UI/UX of various pages.
- ✓ Got hands-on experience with Spring 4.x, Hibernate, and REST Web Services, strengthening my backend expertise.
- ✓ Engaged in multiple client calls, effectively gathering requirements, addressing concerns, and ensuring smooth project execution.
- ✓ Worked in a fast-paced environment, quickly understanding the application landscape and delivering solutions on time despite challenges.

This role strengthened my expertise in full-stack development, API design, cloud technologies, and stakeholder communication, making me adaptable to fast-paced and demanding projects.

Tata Consultancy Services

2 years 10 months

System Engineer

July 2013 - June 2015 (2 years)

At Tata Consultancy Services (TCS), I worked as a Full Stack Developer, contributing to enterprise-grade applications built on a customized framework called BOUNCE (a combination of Spring + Struts). My role involved designing, developing, and optimizing applications, ensuring seamless performance and scalability.

Key Contributions:

- ✓ Developed and maintained enterprise applications using Java, Spring, and Struts, ensuring high-performance and maintainable code.
- ✓ Worked on Java batch processing, handling large-scale data operations efficiently.
- ✓ Designed and optimized database interactions with MySQL and DB2, ensuring data integrity and performance.
- ✓ Deployed applications on JBoss Server, configuring and troubleshooting deployments for stability and efficiency.
- ✓ Collaborated closely with cross-functional teams, participating in code reviews and following best development practices.
- ✓ Enhanced system performance and scalability, optimizing existing implementations and troubleshooting critical production issues.

This experience refined my skills in Java-based enterprise applications, batch processing, database management, and scalable architecture, laying a strong foundation for my career in backend and full-stack development.

Certifications & Professional Development:

Beyond project work, I took the opportunity to enhance my technical expertise by earning industry-recognized certifications:

Oracle Certified Java Programmer (OCJP)

Oracle Certified Web Component Developer (OCWCD)

Oracle Certified Associate (OCA)

Assistant System Engineer

September 2012 - June 2013 (10 months)

Education

Madan Mohan Malaviya Engineering College (MMMEC)

Bachelor of Technology - BTech, Electrical, Electronics and Communications Engineering · (July 2008 - June 2012)
